ICE SKATING FACTS

❄ In order to create an ice rink there must be several inches of frost in the ground. This would require several nights and days of temperatures in the low 20's.

❄ Flooding of rinks does not begin until temperatures are in the low 20's. Water does not freeze on the ground quickly enough to build a rink efficiently if temperatures are higher.

❄ It normally will take 5 to 7 days to build an ice rink with ideal weather conditions. (Several days with No Snow!) Adler Rink takes at least 10 days because there is no liner.

Adler Lodge & Crawford House available for rentals.
